Add a few unames
Login from different browsers   and see the details page ----- user session value will be different for different browsers
PS : also access your server from your mobile (laptop wifi and mobile wifi should be same)

1. REQUEST 1   login (GET) -----------------RESPONSE 1 (html to enter login)
2. REQUEST 2   login button click - verify (POST) ----user==>----------if OK session has user -----RESPONSE 2 first.html
3. REQUEST 3   click link details- details(GET) -----------------RESPONSE 3   -------details.html
4. REQUEST 4   click on somepage - reg(GET) -------------RESPONSE 4 ---- registration.html

HW ---

```python
@app.route("/shop")
def shop():

    if "mylist" in session:
        itemlist=session["mylist"]
    else:
        itemlist=[]
    item = request.args.get("shopitem")
    if item is not None:
        itemlist.append(item)

    session["mylist"]=itemlist

    return render_template("shop.html",mylist=session["mylist"])
```

Try accessing from multiple browsers.
