1. Import modules

HW --

Create a folder D:/Libraries
            stringManipulator.py

                    def   print the passed string in reverse
                    Def tell whether the passed string is palindrome
                    Def   print your name in between passed string
                                Str = "hello"
                                Output = heprachillo

                                Str = blue
                                Ouput = blprachiue

    From your python project where you work
            Import the respective functions give them aliases
             show a menu
             1. rev
             2. palidrome
             3. nameInsert
             4. quit

            Call functions from library
