HW -- Pycharm
Install https://www.jetbrains.com/pycharm/download/?section=windows#section=windows

1. Python does not have switch case .WORK using elif
2. Python does not ++ operator
3. Line Comment in python begins with #
4. Multiline Comment """   comment   lines """

Loops in python ---
   1. while
   2. for loop

       for iterator **in** sequence :
                  Code

        range() = library function
            That generates a sequence of numbers

_____

print(*objects, sep=' ', end='\n', file=None, flush=False*)¶

From <https://docs.python.org/3/library/functions.html#print>

  Ex - accept a separator from user and add that separator while printing
            print(10,20,30)

 print("hi", end=" "); print("bye")

_____

List = defined using [ ] , it can have duplicate values also ,INPUT order is preserved
Set = defined using { } , it cannot have duplicate values , INPUT order is not preserved

Tuple = defined using () , it cannot be modified - immutable

HW ---
   1.
Write a python script that will go on accepting a number from the user till user enters -1
       Add all the numbers to the list   (list.append(pass element))

       Show a menu to user
           1. Show coma separated list
           2. Show list one below the other
           3. Show sum of all numbers in the list
           4. Quit

2. Accept a symbol , lines   from user

Symbol = #

Lines = 4

```
# # # #
# # #
# #
#
# #
# # #
# # # #
```
